Press Release

MBL presents its new mbl 120 loudspeaker

The Berlin high-end audio developer MBL proudly presents the latest newcomer to its new generation of loudspeakers. Answering to the name of “mbl 120“, this new Radialstrahler or “radial beamer” has been specially engineered for medium-sized rooms and can be used as a shelf speaker or a fully fledged room installation using the stands that come with it. Technically speaking, the mbl 120 uses the same new enclosure concept that has already been applied to its legendary brothers and sisters. The tweeter and midrange frequencies use the latest cutting-edge Radialstrahler units for an exceptionally natural and lifelike spatial sound experience of the kind which has become the hallmark of MBL. Aligned in a push-push configuration, the two long-stroke lower midrange drivers are mounted on a solid aluminum block to eliminate unwanted cabinet resonance while the proprietary subsonic filter also reduces chassis oscillation and enables further enhancement of the bass level. Particularly meticulous attention has been lavished on the elegance and harmony of design, paving the way for the introduction of a number of special refinements. Thus the head plate of the speaker stand disappears into a recess of the enclosure and the cables inside the stand are aligned on a ground level position, thereby eliminating unsightly hanging wires. Production of the new mbl 120 speaker is at MBL’s own factory using only the finest materials under compliance with the most rigorous quality standards. The result is a loudspeaker that combines technical maturity with sophistication of design to offer the ultimate in listening pleasure with its unparalleled musical soundstage. The mbl 120 comes in high quality piano lacquer finish in black, white or silver and will be available from May 2010. The manufacturer’s recommended price is € 15,600 (including stands).
