unique high end audio

Press Release

The new mbl 126: MBL presents its smallest ever Radialstrahler

With its latest product, the Berlin high-end developer MBL presents its smallest ever MBL Radialstrahler (omni directional) loudspeaker. This latest addition to the MBL loudspeaker family answers to the name of mbl 126 and is the new entry-level model of the Berlin specialists in high-end audio. Specially developed for smaller sized rooms and multi-channel installations, technologically speaking this little fellow stands nearly as tall as its bigger brothers and sisters. It features the same cabinet design concept and in the high and midrange frequencies the latest advanced developments in omni directional units really come into their own, delivering an exceptionally natural and airy three dimensional sound field – the legendary hallmark of MBL. The two long-throw deep midrange drivers in push-push technology prevent annoying cabinet resonance while a proprietary subsonic filter reduces chassis oscillation and further boosts the bass level. The unparalleled rapidity of the Radialstrahler means that the mbl 126 has truly unrivalled dynamics which enable it to render any kind of music in absolutely natural sound. Production of the mbl 126 follows the best MBL tradition in their own factory using only the finest materials and in compliance with the strictest quality standards. The final product is a technologically mature loudspeaker with a sophisticated appearance that stands for the highest summits of listening pleasure in matchlessly superb three dimensional sound quality. The mbl 126 comes in a choice of satin or high quality piano gloss finish in black, white or silver and retails at a recommended price starting at € 8,800 (including stands). A special Center Speaker version is also available.

About MBL:

Based in Berlin, ever since it was established in 1979, MBL Akustikgeräte GmbH & Co. KG has been specialised in the development and production of exclusive high-end audio equipment. With an intelligent blend of handcraftsmanship and innovative high-tech, its peerless high grade loudspeakers and sound reproduction equipment are built in the company's own factory and shipped throughout the world. A roll-call of honours and distinctions from the international audio press bears testimony to the acoustic and qualitative mastery of MBL and its products. Prices for complete systems range from € 18,000 to € 400,000.
